3.2. Security of your terminal

Upon receipt of your terminal you should check for signs of tampering of the equipment. It is strongly advised that these checks are performed regularly after receipt. You should check, for example: that the keypad is firmly in place; that there is no evidence of unusual wires that have been connected to any ports on your terminal or associated equipment, the chip card reader, or any other part of your terminal. Such checks would provide warning of any unauthorised modifications to your terminal, and other suspicious behaviour of individuals that have access to your terminal. Your terminal detects any “tampered state”. In this state the terminal will repeatedly flash the message “Alert Irruption!” and further use of the terminal will not be possible. If you observe the “Alert Irruption!” message, you should contact the terminal helpdesk immediately.

You are strongly advised to ensure that privileged access to your terminal is only granted to staff that have been independently verified as being trustworthy.

3.4.1. Federal Communications Commission (FCC) Statement

15.21

You are cautioned that changes or modifications not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

15.105(b)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

15.19 (a) (3)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference and
- 2) This device must accept any interference received, including interference that may cause undesired operation of the device.

3.4.2. Industry Canada (IC) Statement.

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

- 1) this device may not cause interference, and
- 2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

- 1) *l'appareil ne doit pas produire de brouillage, et*
- 2) *l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.*

3.4.3. FCC/IC RF Exposure (SAR) Statement.

The iSMP3, incorporating the iPhone 6, has been tested and meets applicable limits for radio frequency (RF) exposure. Specific Absorption Rate (SAR) refers to the rate at which the body absorbs RF energy. The SAR limit is 1.6 watts per kilogram averaged over 1 gram of tissue. During testing, the iPhone 6 radios, incorporated within the iSMP3, are set to their highest transmission levels and placed in positions that simulate use against the head, with no separation, and near the body, with 5mm separation. When using the incorporated iPhone 6 functionality, to reduce exposure to RF energy, use a hands-free option, such as the built-in speakerphone, the supplied headphones or other similar accessories. Carry the iSMP3 at least 5mm away from your body to ensure exposure levels remain at or below the as-tested levels. Cases with metal parts may change the RF performance of the device, including its compliance with RF exposure guidelines, in a manner that has not been tested or certified.

L'iSMP3 qui intègre un iPhone 6, a été testé et conforme aux limites d'exposition aux radiofréquences (RF). Le DAS (Débit d'Absorption Spécifique) fait référence au taux d'absorption des tissus humains aux ondes électromagnétiques. La limite du DAS est de 1,6W/kg en moyenne pour 1 gr de tissu. Pendant le test, les différents émetteurs radio de l'iPhone 6, couplés à l'iSMP3, sont positionnés à leur plus haut niveau de transmission et placés de telle manière qu'ils simulent une utilisation contre la tête sans séparation et proche du corps avec 5mm de séparation. Lors de l'utilisation d'un iPhone 6 dans un iSMP3, pour réduire l'exposition aux ondes électromagnétiques, il est conseillé d'utiliser le mode main libre avec le mode haut-parleur ou bien en utilisant les écouteurs ou accessoires similaires. Garder l'iSMP3 à 5mm de votre corps permet de garantir un niveau d'exposition inférieur ou égale aux niveaux

testés. Des cas d'utilisation de l'iSMP3 sur pièces métalliques peuvent modifier les performances radio de l'appareil pouvant remettre en cause son DAS. Ces cas précis ne sont pas testés et certifiés.

The iSMP3 complies with the FCC safety requirements for RF exposure in accordance with FCC rule part §2.1093 and KDB447498 D01 for portable use conditions.

L'iSMP3, dans un mode portable de fonctionnement, est conforme aux exigences de sécurité FCC concernant l'exposition aux ondes électromagnétiques suivant les règles FCC part §2.1093 et KDB447498 D01

The iSMP3 complies with the IC safety requirements for RF exposure in accordance with RSS-102 Issue 5 for portable use conditions.

L'iSMP3, dans un environnement portable, est conforme aux exigences de sécurité IC concernant l'exposition aux ondes électromagnétiques suivant les règles RSS-102 Issue 5

The iSMP3, incorporating the iPhone 6, must not be co-located or operated in conjunction with any other antenna or transmitter.

L'iSMP3 qui intègre un iPhone 6, ne doit pas être couplé et opéré avec d'autres antennes ou émetteurs radio.

CAUTION

The user is cautioned that any changes or modification not approved by INGENICO could void user's authority to operate the equipment.

3.5. Marking

The UL mark appears on end products and complete components suitable for factory and field installation. All of the products carrying these marks are covered by our Follow-Up Services program to determine that products continue to be manufactured in compliance with UL's safety requirements.

The RCM mark will be the only mark to indicate compliance with the Australian Communications and Media Authority's (ACMA) regulatory arrangements for telecommunications, radio, EMC and electromagnetic energy (EME).

The C-Tick is an identification trademark registered to the Australian Communications Media Authority (ACMA). The C-Tick mark signifies that the labelled electronic device is compliant with applicable electromagnetic compatibility (EMC) requirements

conserved.

Waste of Electrical and Electronic Equipment (WEEE) symbol indicates that when the end-user wishes to discard this product, it must be sent to separate collection facilities for recovery and recycling. By separating this product from other household-type waste, the volume of waste sent to incinerators or land-fills will be reduced and natural resources will thus be

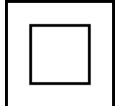

This logo indicates that the product operates with an alternative voltage. This symbol is followed by the ratings (voltage and current for instance)

This logo indicates that the product operates with a continuous voltage. This symbol is followed by the ratings (voltage and current for instance)

Mark indicating a power supply meets the level V requirements.

Double insulated or class 2 electrical appliances are products that have been designed in a way so as not to require a safety connection to electrical earth (These products must NOT have a safety connection to Earth).
