# **Accredited Testing Laboratory:**

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2005) by the Deutsche Akkreditierungsstelle GmbH (DAkkS)

The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate with

the registration number: D-PL-12076-01-03

#### **Test Item**

Kind of test item: Payment Terminal

Model name: Lane/5000 CL/Eth/WiFi/BT

 FCC ID:
 XKB-L5000CLWIBT

 IC:
 2586D-L5000CLWIBT

 Frequency:
 13.110 MHz to 14.010 MHz

Technology tested: NFC / RFID

Antenna: Integrated loop antenna

Power supply: 115 V AC & 8 V DC by mains adapter

Temperature range: 0°C to +40°C

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

### 2 General information

#### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CTC advanced GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CTC advanced GmbH.

The testing service provided by CTC advanced GmbH has been rendered under the current "General Terms and Conditions for CTC advanced GmbH".

CTC advanced GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CTC advanced GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CTC advanced GmbH test report include or imply any product or service warranties from CTC advanced GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CTC advanced GmbH.

All rights and remedies regarding vendor's products and services for which CTC advanced GmbH has prepared this test report shall be provided by the party offering such products or services and not by CTC advanced GmbH. In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

1-5253/17-01-01\_AnnexB 1-5253/17-01-01\_AnnexD

© CTC advanced GmbH Page 5 of 27

# 6 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

#### Agenda: Kind of Calibration

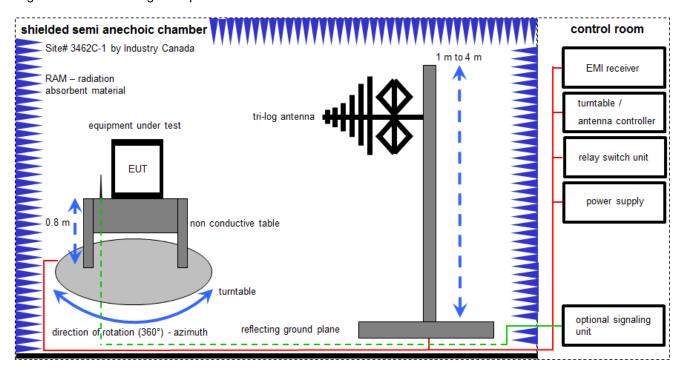

| k     | calibration / calibrated                   | EK  | limited calibration                              |
|-------|--|-----|--|

### 6.1 Shielded semi anechoic chamber

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 30 MHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are conform to specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter

FS = UR + CL + AF

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

#### Example calculation:

 $FS [dB\mu V/m] = 12.35 [dB\mu V/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dB\mu V/m] (35.69 \mu V/m)$

# 6.4 Test setup for normalized measurement configurations and extreme conditions

OP = AV + CA

(OP-output power; AV-analyzer value; CA-loss signal path)

### Example calculation:

OP [dBm] = 6.0 [dBm] + 11.7 [dB] = 17.7 [dBm] (58.88 mW)

### **Equipment table:**

# 7 Sequence of testing

# 7.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, it is placed on a table with 0.8 m height.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### Premeasurement\*

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

#### Final measurement

- Identified emissions during the pre-measurement are maximized by the software by rotating the turntable from 0° to 360°.
- Loop antenna is rotated about its vertical axis for maximum response at each azimuth about the EUT.
   (For certain applications, the loop antenna plane may also need to be positioned horizontally at the specified distance from the EUT)
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

© CTC advanced GmbH Page 11 of 27

<sup>\*)</sup>Note: The sequence will be repeated three times with different EUT orientations.

# 7.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

#### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

# 11 Measurement results

# 11.1 Occupied bandwidth

### **Measurement:**

The emission bandwidth (x dB) is defined as the frequency range between two points, one above and one below the carrier frequency, at which the spectral density of the emission is attenuated x dB below the maximum in-band spectral density of the modulated signal.

| Measurement parameters   |                                     |  |  |
|--------------------------|-------------------------------------|--|--|
| Detector:                | Peak                                |  |  |
| Resolution bandwidth:    | 1 % – 5 % of the occupied bandwidth |  |  |
| Video bandwidth:         | ≥ 3x RBW                            |  |  |
| Trace mode:              | Max hold                            |  |  |
| Analyser function:       | 99 % power function                 |  |  |
| Used equipment:          | See chapter 6.4 – A                 |  |  |
| Measurement uncertainty: | See chapter 8                       |  |  |

# 11.4 Conducted limits

# **Measurement:**

Measurement of the conducted spurious emissions for an intentional radiator that is designed to be connected to the public utility (AC) power line.

| Measurement parameters   |                              |  |  |  |
|--------------------------|------------------------------|--|--|--|
| Detector:                | Quasi peak / average or      |  |  |  |
| Detector.                | peak (worst case – pre-scan) |  |  |  |
| Resolution bandwidth:    | F < 150 kHz: 200 Hz          |  |  |  |
|                          | F > 150 kHz: 9 kHz           |  |  |  |
| Video bandwidth:         | F < 150 kHz: 1 kHz           |  |  |  |
|                          | F > 150 kHz: 100 kHz         |  |  |  |
| Trace mode:              | Max hold                     |  |  |  |
| Used equipment:          | See chapter 6.3 – A          |  |  |  |
| Measurement uncertainty: | See chapter 8                |  |  |  |

# Limit:

|            | FCC & IC   |           |
|------------|------------|-----------|
| Frequency  | Quasi-peak | Average   |
| (MHz)      | (dBµV/m)   | (dBµV/m)  |
| 0.15 – 0.5 | 66 to 56*  | 56 to 46* |
| 0.5 – 5    | 56         | 46        |
| 5 – 30.0   | 60         | 50        |

# 11.5 Frequency error

### **Measurement:**

The maximum detected field strength for the spurious.

| Measurement parameters   |                     |  |  |
|--------------------------|---------------------|--|--|
| Detector:                | Peak detector       |  |  |
| Resolution bandwidth:    | 10 Hz / 100 Hz      |  |  |
| Video bandwidth:         | > RBW               |  |  |
| Trace mode:              | Max hold            |  |  |
| Used equipment:          | See chapter 6.4 – A |  |  |
| Measurement uncertainty: | See chapter 8       |  |  |

### Limit:

# FCC & IC

The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. (±1.356 kHz)

Carrier frequency stability shall be maintained to ±0.01% (±100 ppm)

# **Result:** Temperature variation

| Measured frequency<br>(MHz) | Conditions            | Result    |
|-----------------------------|-----------------------|-----------|
| 13.55951                    | -20 °C & 100% voltage | compliant |
| 13.55950                    | -10 °C & 100% voltage | compliant |
| 13.55948                    | 0 °C & 100% voltage   | compliant |
| 13.55944                    | +10 °C & 100% voltage | compliant |
| 13.55943                    | +20 °C & 100% voltage | compliant |
| 13.55942                    | +30 °C & 100% voltage | compliant |
| 13.55941                    | +40 °C & 100% voltage | compliant |
| 13.55940                    | +50 °C & 100% voltage | compliant |

#### **Result:** Voltage variation

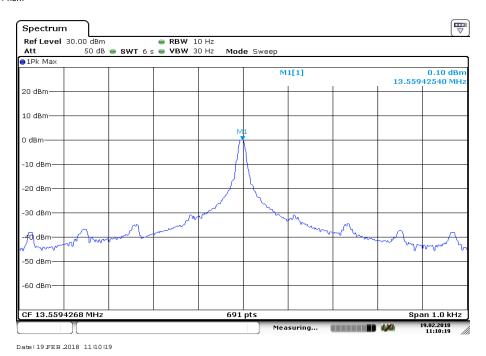

| Measured frequency<br>(MHz) | Conditions            | Result    |
|-----------------------------|-----------------------|-----------|
| 13.55943                    | +20 °C & 85% voltage  | compliant |
| 13.55943                    | +20 °C & 100% voltage | compliant |
| 13.55943                    | +20 °C & 115% voltage | compliant |

# Annex C Accreditation Certificate

| first page  | last page  |
|---|--|
| Deutsche Akkreditierungsstelle GmbH  Entrusted according to Section 8 subsection 1 AkkStelleG in connection with Section 1 subsection 1 AkkStelleGBV Signatory to the Multilateral Agreements of EA, ILAC and IAF for Mutual Recognition  Accreditation  The Deutsche Akkreditierungsstelle GmbH attests that the testing laboratory  CTC advanced GmbH  Untertürkheimer Straße 6-10, 66117 Saarbrücken  Is competent under the terms of DIN EN ISO/IEC 17025:2005 to carry out tests in the following fields:  Telecommunication | Deutsche Akkreditierungsstelle GmbH  Office Berlin Spittelmarkt 10 10117 Berlin G0327 Frankfurt am Main G0ffice Braunschweig Bundesallee 100 38116 Braunschweig Bundesallee 100 38116 Braunschweig  The publication of extracts of the accreditation certificate is subject to the prior written approval by Deutsche Akkreditierungsstelle GmbH (DAkkS). Exempted is the unchanged form of separate disseminations of the cover sheet by the conformity assessment body mentioned overleaf.  No impression shall be made that the accreditation also extends to fields beyond the scope of accreditation attested by Daks.  |
| The accreditation certificate shall only apply in connection with the notice of accreditation of 02.06.2017 with the accreditation number D-P-L2076-01 and is valid until 21.04.2021. It comprises the cover sheet, the reverse side of the cover sheet and the following annex with a total of 43 pages.  Registration number of the certificate: D-Pl-12076-01-03   | The accreditation was granted pursuant to the Act on the Accreditation Body (A&Schelled) of 31, July 2009 (Federal Law Gazette Is, 265) and the Regulation (EQ No 265/2008 of the European Parliament and of the Council of 9 July 2008 setting out the requirements for accreditation and market surveillance relating to the marketing of products (Official Journal of the European Indian L. 218 of 9 July 2008, p. 30). DAMAS is a signatory to the Multilateral Agreements for Mutual Recognition of the European co-operation for Accreditation (EQ.) International Laboratory Accreditation Coperation (EJ.). The signatories to these agreements recognise each other's accreditations.  The up-to-date state of membership can be retrieved from the following websites:  EA: www.upcpan-accreditation.org II.AC: www.llac.org IAF: www.llac.org |
| Frankfurt, 02.06.2017  Opping (174) and planer Heelds of Obvision  to come control.   | , a  |

Note: The current certificate annex is published on the website (link see below) of the Accreditation Body DAkkS or may be received by CTC advanced GmbH on request
